Anderson's mission was to gather data on the structure and intensity of hurricanes, which were then poorly understood. By flying into the storms, he risked his life to collect information that would help save lives and property.

Over the next two decades, Anderson and his team of hurricane hunters would fly into countless storms, collecting data that would revolutionize our understanding of these powerful weather events. They discovered that hurricanes are not simply circular windstorms, but rather complex systems with multiple eyewalls and a variety of other features.
